

Launch Fix Brief for Aniket

Reverse-engineered from the 22 Aug client walkthrough

TWO DEADLINES

- TONIGHT - 24 Aug 2026: put a stable site live, fix the current email issue, submit DLT registration, and complete a production smoke test.
- 31 Aug 2026: finish the agreed walkthrough fixes, client-facing polish, mobile QA and launch readiness.

How to use this document

- Execute in priority order. Do not start P1 polish while a P0 item is still red unless P0 is waiting on an external approval.
- Every product fix below is tied to a real transcript capture. Current directives added after the meeting are explicitly labelled so they are not confused with transcript evidence.
- Do not redesign the product. Fix the current build to match the decisions and feedback already given.
- For each item, append Status, What changed and Proof/URL. A task is not complete without working proof on the live or staging build.

Priority meaning

P0	TODAY / BLOCKER	Infrastructure or failure that blocks a live site or further development.
P1	BEFORE 31 AUG	Confirmed walkthrough fixes required for launch readiness.
P2	AFTER CORE	Non-blocking polish or content-dependent items.
HOLD	DO NOT BUILD	Brainstorming, future ideas or unresolved policy.

Source discipline Transcript wording has been lightly cleaned only where the intended product term is obvious. Ambiguous policy is kept open rather than invented.

P0 | TONIGHT: INFRASTRUCTURE + LIVE BASELINE

Execution order

1) DLT submission -> 2) Email issue -> 3) Production deploy -> 4) Production smoke test.
Do the DLT submission first because the meeting established a 6-7 working-day lead time.

P0 P0.1 Submit DLT registration now

ANIKET

TODO

DO Start and submit the DLT/SMS OTP registration/application today. Save the application/reference ID, required entity/template details and any pending documents. Do not wait for the rest of the UI work.

DONE WHEN Submission is initiated today; reference/acknowledgement is captured; blockers are written down; the SMS OTP integration can proceed as soon as registration clears.

CURRENT DIRECTIVE Aakash, 24 Aug: Aniket must do the DLT registration so SMS OTP development can continue.

TRANSCRIPT CAPTURE | Part 1 - meetingss | 03:16-03:50

Aakash: The SMS OTP thing has a process to it. If we want it active, it requires maybe 6 to 7 working days. It would be best if you make an application now.

Aakash: All you have to do is say yes, and if you do, we will make the application and get it done.

Transcript says "application"; "DLT registration" is the current 24 Aug founder directive naming the required process.

ANIKET UPDATE Status: _____ What changed: _____ Proof/URL: _____

P0 P0.2 Fix the current email OTP issue

ANIKET

TODO

DO Reproduce the current email problem on the production path. Fix delivery/verification so a user can request an OTP, receive the Reloved login code, enter it and complete sign-in. Verify resend and error states if they exist in the current flow.

DONE WHEN Three consecutive real tests pass on production or production-equivalent: request OTP -> email arrives -> correct code verifies -> wrong/expired code fails cleanly. Log the root cause and proof.

CURRENT DIRECTIVE Aakash, 24 Aug: finish the email issue that currently exists before tonight's live baseline.

TRANSCRIPT CAPTURE | Part 1 - meetingss | 09:30-10:01 and 17:09-17:32

Aakash: Right now I have added email verification via OTP. When you add your email, you cannot go ahead without verification.

Aakash: I received an email from Reloved Digital. This is your login code. Only then can I verify and sign in. Similarly, you will get it on SMS also.

The 22 Aug walkthrough demonstrated the intended email OTP behavior. The existence of a current email defect is a 24 Aug founder directive, not established by the transcript.

ANIKET UPDATE Status: _____ What changed: _____ Proof/URL: _____

P0 P0.3 Put the site live tonight + smoke test it

ANIKET

TODO

DO Deploy the current stable build to the main/live environment tonight. Do not wait for every P1 visual refinement. Immediately test it as a real donor, claimer and operator: Homepage -> Wall/Browse -> Drop -> OTP/Auth -> submit -> Admin -> Claim -> visible status.

DONE WHEN Main domain/live URL resolves; core routes load on desktop and mobile; auth/email works; one donor loop and one claimer loop complete without fatal/console-blocking errors; deployment version/commit and proof are recorded.

CURRENT DIRECTIVE Aakash, 24 Aug: site must be live tonight; 31 Aug becomes the final launch-ready target, not the first deployment date.

TRANSCRIPT CAPTURE | Part 2 - meeting 2ss + Part 1 - meetingss | 16:15-16:32 + 02:05-03:15

Aakash: Before 31st we will have this website ready, live and ready.

Aakash: The second thing is the actual journey the user goes on when they are either giving an item or claiming an item.

Aakash: Third thing is I will walk you through your admins control... what happens and what do you have to do to make sure that it goes on your website?

Deadline override: the original meeting target was before 31 Aug. Current founder directive brings the first production deployment forward to tonight, 24 Aug.

ANIKET UPDATE Status: _____ What changed: _____ Proof/URL: _____

P1 | CORE PRODUCT FIXES: DROP + CATALOGUE

P1 P1.1 Lock launch catalogue to wearables

ANIKET

TODO

DO For launch, remove or hide unsupported toy/homeware categories from user-facing upload and browse flows. Keep the taxonomy focused on clothes, shoes and bags/wearables.

DONE WHEN A donor cannot accidentally publish through a toy/homeware path; upload categories and browse taxonomy reflect the launch scope.

TRANSCRIPT CAPTURE | Part 1 - meetingss | 03:51-04:14

Sheetal: We are not doing toys or homeware. It is mostly empty out your closet.

Sheetal: Clothes, shoes, bags. That is it.

Aakash: Wearables mainly.

ANIKET UPDATE Status: _____ What changed: _____ Proof/URL: _____

P1 P1.2 Simplify Drop form: defects optional + gender

ANIKET

TODO

DO Make defects/notes optional. Add gender/audience metadata for Men, Women and Unisex where relevant. Keep only truly necessary fields mandatory.

DONE WHEN A user can submit without entering defects; gender/audience is captured and persists into admin/item data; required fields are visually obvious and minimal.

TRANSCRIPT CAPTURE | Part 1 - meetingss | 08:48-09:16

Sheetal: We do not need to make it compulsory. It gets irritating, typing too much.

Aakash: Do not keep defects compulsory.

Sheetal: Gender you need to add. That is missing now.

Aakash: And unisex is also done, obviously.

ANIKET UPDATE Status: _____ What changed: _____ Proof/URL: _____

P1 P1.3 Add donor display identity choice

ANIKET

TODO

DO Replace the rigid first-name-only treatment with clear choices: display first name, stay anonymous, or use an alias/username. Keep the implementation simple and consistent in donor/public recognition surfaces.

DONE WHEN Submission records the chosen display identity; anonymous does not expose the real name publicly; alias is editable/validated.

TRANSCRIPT CAPTURE | Part 1 - meetingss | 10:06-10:37

Sheetal: Show my first name, keep me anonymous, or add a name... like make your Digital Wall of Kindness name.

Aakash: Like an alias... You can either use a username or, if they want, keep the name anonymous.

Sheetal: Rather than writing the name thing, show my first name or...

Aakash: We will add an alias.

ANIKET UPDATE Status: _____ What changed: _____ Proof/URL: _____

P1 P1.4 Make location structured, not typing-heavy

ANIKET

TODO

DO Keep browser location permission as convenience, but add structured manual fallback: city -> locality/postcode/address. Avoid forcing free-text locality where it can be selected or derived.

DONE WHEN User can finish with location permission ON or OFF; Mumbai/locality/postcode path works; saved handover address is unambiguous enough for operations.

TRANSCRIPT CAPTURE | Part 1 - meetingss | 11:45-13:23

Sheetal: Rather than having location, choose your city... then in a drop-down menu it comes which location... rather than typing.

Aakash: Some people do not give location permission... this is a fallback.

Sheetal: 400050, it automatically comes to Bandra.

Aakash: She is right. It is basically an optionality.

ANIKET UPDATE Status: _____ What changed: _____ Proof/URL: _____

P1 | PRODUCT IMAGES + WALL / BROWSE

P1 P1.5 Normalize uploaded product images

ANIKET

TODO

DO Make background removal run for both single and bulk uploads. Product output should use a clean light/white background. Handle white garments with enough edge/shadow separation that they do not disappear.

DONE WHEN Single and bulk upload both return clean product cutouts; white garment test is visually readable; failure state does not silently publish a broken image.

TRANSCRIPT CAPTURE | Part 1 - meetingss | 13:44-16:07

Reyansh: Whenever we are uploading the picture, would it look better if the background is white?

Aakash: Once it analyzes, it will automatically remove your background.

Sheetal: When they upload, within a few seconds it will be white.

Sheetal: When a clothing item is white... you can just have that little shadow at the rim.

Aakash: Yes.

ANIKET UPDATE Status: _____ What changed: _____ Proof/URL: _____

P1 P1.6 Add Men / Women / Kids browse filters

ANIKET

TODO

DO Keep one Wall of Kindness browsing experience and add the required audience/category filtering instead of creating unnecessary separate pages.

DONE WHEN Filters visibly include Men, Women and Kids where inventory exists; results change correctly; no dead category route is introduced.

TRANSCRIPT CAPTURE | Part 2 - meeting 2ss | 09:29-10:04

Sheetal: There should be a drop-down menu saying men, women, kids.

Aakash: Right here I will add a filter: men, women, kids.

Sheetal: Like in that only. So you go to clothing. This goes away.

ANIKET UPDATE Status: _____ What changed: _____ Proof/URL: _____

P1 P1.7 Use Drop / Claim language and clean claim states

ANIKET

TODO

DO Change primary actions from Give/Take to Drop/Claim where they appear in the user journey. Use a simple intermediate/final status model; keep the in-process label configurable until Aakash signs the final wording.

DONE WHEN Primary CTAs say Drop an Item / Claim an Item; final claimed state is clear; no inconsistent Give/Take labels remain in the main flow.

TRANSCRIPT CAPTURE | Part 1 - meetingss | 27:58-28:46

Sheetal: We are changing the thing to drop an item and claim an item. Rather than give and take, we do drop and claim.

Sheetal: We put claimed.

Aakash: Being matched will be in the process.

Sheetal: Being matched sounds nice.

The action labels are clear. Exact intermediate status wording was discussed, not conclusively locked; keep it easy to change.

ANIKET UPDATE Status: _____ What changed: _____ Proof/URL: _____

P1 P1.8 Remove mandatory ID from Claim

ANIKET

TODO

DO The Claim flow must not require Aadhaar/passport/driving licence or other ID proof. If an optional hook exists in the code, keep it disabled unless separately approved.

DONE WHEN A new user can complete a claim without ID upload; no ID field blocks submission; no copy implies ID is compulsory.

TRANSCRIPT CAPTURE | Part 1 - meetingss | 22:08-22:24

Aakash: Do you want to take their ID proof?

Sheetal: Would you give your ID to a new website? ... I would not.

Aakash: No worries. We will remove it.

Sheetal: But optional is okay.

Mandatory ID was rejected. Optional ID was discussed but not clearly approved for launch; do not make it a launch dependency.

ANIKET UPDATE Status: _____ What changed: _____ Proof/URL: _____

P1 | ADMIN, APPROVALS + STATE

P1 P1.9 Keep pilot moderation controllable

ANIKET

TODO

DO For the pilot, preserve operator visibility over new donor submissions and claim requests. Do not silently auto-publish everything. Keep the donor auto-approval behavior behind a switch/config so it can be enabled later without rewriting the flow.

DONE WHEN Admin can see new submissions; approve/reject works; claimant requests require operator handling; any auto-approval setting is explicit and off/on intentionally.

TRANSCRIPT CAPTURE | Part 2 - meeting 2ss | 13:35-15:51

Aakash: This is your inventory to approve or reject anybody's claims or gifts.

Sheetal: But we do not want an approval. We want them to upload it.

Aakash: I thought we should have an approval system. We can have auto approval.

Waseem: Auto approval works actually.

Sheetal: Yeah, but later it should work automatically.

Aakash: Initially we cannot afford to fall.

Interpretation: pilot safety/manual control remains useful; eventual donor automation is desired. Do not confuse donor publishing with claim allocation, which still requires control.

ANIKET UPDATE Status: _____ What changed: _____ Proof/URL: _____

P1 P1.10 Status + messaging must be visible to users

ANIKET

TODO

DO A donor/claimer should be able to see their submissions/claims and current status. Operator actions should update those states. Preserve the operator messaging/status path described in the walkthrough.

DONE WHEN Profile shows dropped/submitted items and requested/claimed items; status changes are reflected after operator action; user is not left with a silent request.

TRANSCRIPT CAPTURE | Part 2 - meeting 2ss | 15:12-16:32 and Part 1 23:33-24:54

Aakash: You will get an email also. Somebody just submitted a new item.

Aakash: When somebody puts the request that I want to claim these shoes... this is our main thing. We cannot just have somebody take it automatically.

Aakash: On the profile of the user who has claimed... you will see whatever you have claimed or want to claim over here.

ANIKET UPDATE Status: _____ What changed: _____ Proof/URL: _____

P1 P1.11 Remove claimed items from active merchandising

ANIKET

TODO

DO Once an item is successfully claimed/allocated, stop presenting it as active inventory in hero rotations and available browse results. Preserve it in history/status where appropriate.

DONE WHEN Claimed item cannot be claimed again; it disappears from active merchandising; existing request/history remains traceable.

TRANSCRIPT CAPTURE | Part 2 - meeting 2ss | 11:33-12:23

Aakash: There will be a rotation of the items. As soon as there is a claim, we will remove it from the hero section.

ANIKET UPDATE Status: _____ What changed: _____ Proof/URL: _____

P1 | HOMEPAGE + VISUAL FIX PASS

P1 P1.12 Make the hero feel like a store, not a prototype

ANIKET

TODO

DO Increase the Reloved logo prominence to match the approved brand treatment; reduce product tile size/density enough to create space; preserve product attraction; make navigation collapse/recede on scroll if needed.

DONE WHEN On desktop and mobile the Reloved identity is immediately visible, product cards do not overpower it, and nav does not permanently consume hero space.

TRANSCRIPT CAPTURE | Part 1 - meetingss | 16:07-19:43

Sheetal: We will make this logo bigger... this has to be big like a store logo. This should look like a store.

Sheetal: We need to make the pieces of the clothes, the square, smaller.

Aakash: When you scroll down, this navigation bar will collapse. It will become less in your face.

ANIKET UPDATE Status: _____ What changed: _____ Proof/URL: _____

P1 P1.13 Use the approved wall + controlled neutral system

ANIKET

TODO

DO Do not introduce random dark/grey/brick backgrounds. Keep the approved wall treatment in the hero/brand environment. Use clean cream/off-white supporting surfaces where a full wall would make functional pages too busy.

DONE WHEN Hero uses the agreed wall direction; lower/functional surfaces are coherent cream/off-white; no arbitrary grey or unrelated background treatment appears.

TRANSCRIPT CAPTURE | Part 1 - meetingss | 16:24-16:30 and Part 2 02:40-03:12

Sheetal: This should be the wall through and through. We do not change it to a brick wall. So this is approved.

Sheetal: We can just stick to the same wall.

Sheetal: Down you can have your plain cream... not grey, like the cream which you showed me earlier.

Implementation nuance: preserve the wall as the brand environment; supporting UI may use the agreed cream neutral to avoid visual overload.

ANIKET UPDATE Status: _____ What changed: _____ Proof/URL: _____

P1 P1.14 Reduce color noise; use only Reloved accents

ANIKET

TODO

DO Remove unrelated yellow/blue/purple accent usage. Use black/white/neutral as the base and Reloved pink/green intentionally. Pink can replace yellow emphasis; green is suitable for confirmations/status where useful.

DONE WHEN No stray non-brand accent colors remain in the core flow; CTA/status colors are consistent; contrast passes basic readability.

TRANSCRIPT CAPTURE | Part 1 - meetingss | 22:33-24:05 and Part 2 07:34-08:30

Sheetal: We are doing... black and white. But we need a little pink and green somewhere.

Sheetal: We will use only our colors. Pink, whatever is our color.

Sheetal: You can have pink rather than yellow.

Sheetal: I think simple only. Simple simple.

ANIKET UPDATE Status: _____ What changed: _____ Proof/URL: _____

P1 P1.15 Simplify homepage sections

ANIKET

TODO

DO Replace Partners in navigation with Our Story. Remove the over-interactive lifecycle section and create a clean placeholder/slot for a short how-it-works video. Hide an empty Wall of Love until Ashram content exists. Move/remove Impact Map from the primary landing flow.

DONE WHEN Nav says Our Story, not Partners; lifecycle interaction is gone; video slot does not break the page if content is pending; empty social-proof sections are not shown; homepage remains short and coherent.

TRANSCRIPT CAPTURE | Part 2 - meeting 2ss | 03:14-06:49 and Part 1 20:40-21:11

Sheetal: Partners we are not going to have. So instead of that we will add Our Story.

Aakash: This interactive life cycle should be replaced with a video because there is too much interaction.

Sheetal: So this goes away.

Sheetal: Right now if you have [Wall of Love] and we do not have any people, it will be blank.

Aakash: I will comment it out.

Sheetal: Impact Map... we do not need it right here, right? We can have it in Our Story.

ANIKET UPDATE Status: _____ What changed: _____ Proof/URL: _____

P1 / P2 | UX POLISH + OPEN ITEMS

P1

P1.16 Fewer clicks, especially on mobile

ANIKET

TODO

DO Review the entire Drop and Claim journey on mobile. Remove unnecessary taps, duplicate screens and oversized content. Preserve clear loading/pressed feedback so users know an action registered.

DONE WHEN Aakash can complete Drop and Claim on a phone without confusing backtracking; buttons show immediate feedback; no horizontal overflow; forms and hero fit common mobile widths.

TRANSCRIPT CAPTURE | Part 2 - meeting 2ss | 10:47-11:29 and 19:06-19:19

Aakash: On the phone, he knows that he has pressed the button. But if you do not, you do not come to know a lot of the times.

Sheetal: This is too long. The bottom we are reducing.

Sheetal: Make it as simple and fewer clicks as possible.

Aakash: Minimum number of clicks to donate, to take. That is it.

ANIKET UPDATE Status: _____ What changed: _____ Proof/URL: _____

P2

P2.1 Add a how-it-works video slot, not a fake finished video

ANIKET

TODO

DO Implement the section/container and graceful fallback. Do not fabricate the final video. Content will come from the activation/real process footage.

DONE WHEN Homepage works with placeholder/poster or hidden state; video can be swapped in without restructuring the page.

TRANSCRIPT CAPTURE | Part 2 - meeting 2ss | 05:19-06:29

Aakash: Remove it. Make an introductory video.

Sheetal: You can have a tutorial online how to do it.

Aakash: A short 30 seconds... basically this interactive life cycle should be replaced with a video.

Sheetal: So this goes away.

ANIKET UPDATE Status: _____ What changed: _____ Proof/URL: _____

OPEN - DO NOT INVENT

- 1) Final homepage line that makes "everything is free" immediately obvious. Sheetal explicitly asked for time to think about it.
- 2) Exact intermediate claim status wording ("Being Matched" was liked, but not formally locked).
- 3) Any weekly claim limit such as 3/week. The walkthrough says restrictive logic was not yet set up; that is not the same as client approval of the rule.
- 4) Optional ID proof. Mandatory ID is out; optional ID is not required for launch.

TRANSCRIPT CAPTURE | Part 2 - meeting 2ss | 00:32-01:23

Aakash: The taker wants to know it is for free. He needs to be assured. An introduction is primarily for that.

Sheetal: The Digital Wall of Kindness does not say it enough.

Sheetal: Okay, so we will add a line somewhere, but give me a day to think about it.

HOLD + LAUNCH CHECKLIST

DO NOT BUILD FOR 31 AUG

Exchange model, cafe/turf/restaurant activation systems, compulsory Instagram-follow gating, broad partner-map expansion, complex rewards, or any new marketplace mechanic. These were later activation brainstormers, not approved launch software requirements.

TRANSCRIPT CAPTURE | Part 3 - meeting 3ss | 05:17-05:34

Speaker attribution uncertain in this later snippet: *What do you think of the exchange model? ... T-shirt for exchange. All these things in the future. Possible.*

Later Part 3 speaker numbers are not safely mapped to the same people as Parts 1-2. Treat this as future brainstorming, not a launch feature.

Tonight - 24 Aug: release gate

- ☐ DLT registration/application submitted; acknowledgement/reference saved.
- ☐ Email OTP issue reproduced, fixed and verified with real inbox tests.
- ☐ Live site deployed to main environment/domain.
- ☐ Homepage, Wall, Drop, Claim, Profile/Auth and Admin load in production.
- ☐ One donor submission reaches admin.
- ☐ One claim request reaches admin and is visible to the user.
- ☐ No fatal console/server errors in the smoke path.
- ☐ Build URL + commit/version shared with Aakash.

By 31 Aug: launch-ready gate

- ☐ Wearables-only launch taxonomy is correct.
- ☐ Drop form is low-friction: defects optional, gender present, alias/anonymous supported.
- ☐ Location fallback works without browser permission.
- ☐ Single + bulk image background removal works, including white garment test.
- ☐ Men/Women/Kids browse filtering works.
- ☐ Drop/Claim labels are consistent and mandatory ID is removed.
- ☐ Admin moderation + claim allocation + user statuses work end to end.
- ☐ Claimed inventory is not merchandised as available.
- ☐ Homepage visual pass matches client feedback: larger logo, approved wall, cream neutrals, Reloved accents only.
- ☐ Our Story/nav + simplified sections are in place; empty sections are hidden.
- ☐ Mobile Drop + Claim are clean, responsive and minimum-click.
- ☐ Aakash final smoke test passes on production.

Final developer handoff

Live URL	_____
Build / commit	_____
DLT reference	_____
Email issue root cause	_____
Remaining blockers	_____
Ready for Aakash QA	_____

Execution rule: Do not mark a task DONE because the code changed. Mark it DONE only when the required behavior works and the proof is attached.
