

Reloved

Project Status Report & Roadmap

What has been built, what is still underway, and what comes next — end to end.

✓ Done — live on the production site

⚠ In Progress — working, being refined

✗ Not Started — planned, not begun

Reloved takes a donated item from a phone photo to a doorstep delivery. The diagram below is the actual journey every item takes on the platform today. Each step below is then broken down to show exactly what is built, working, and still underway.

HOW RELOVED WORKS — THE JOURNEY

Every step above runs on top of four things working quietly in the background on every single item: privacy & security, platform stability, admin tools, and engineering process. Those are covered as “Supporting Pillars” after the 6 steps.

34 Done

2 In Progress

1 Not Started

STEP 1 · Donor Posts an Item

✓ Full donation flow
Post an item, add multiple photos, drop several items at once.

✓ Auto-save drafts
In-progress donations are saved automatically — nothing is lost on refresh or accidental exit.

✓ Partial-failure protection
If one item in a bulk drop fails, only that one needs retrying — the rest are safe.

✓ Friendly error recovery
Clear error messages with a one-tap retry instead of restarting the whole submission.

STEP 2 · AI Processes the Photos

✓ AI photo processing
Every item gets a styled photo and a clean white-background cutout, plus the original.

✓ iPhone photo support
Apple's HEIC photo format now displays correctly on every device and browser.

- ✓ **Light-garment fix**
Fixed white/cream clothing disappearing or washing out against the white background.
- ✓ **Correct photo matching**
Fixed a mix-up where the Wall showed the wrong photo type for some items.
- ✓ **Faster uploads**
Photos are compressed and resized before sending, so uploads stay quick on mobile data.

STEP 3 · Item Goes Live on the Wall

- ✓ **Instant publishing**
Items go live on the public Wall of Kindness right away, no manual approval needed.

STEP 4 · Recipient Claims It

- ✓ **Claim locking**
Once claimed, an item locks immediately so it can never go to two people.

STEP 5 · Courier Pickup & Delivery

- ✓ **Courier integrations**
Borzo, Shadowfax, and Shiprocket all bookable, trackable, and cancellable from Admin.
- ✓ **Live tracking link**
Recipients get a live rider-tracking link by SMS/email when a delivery is dispatched.
- ✓ **No duplicate bookings**
Clicking 'Book' twice can no longer create two bookings or double charges.
- ✓ **In-transit lock**
Items can no longer be withdrawn or edited while a courier pickup is already underway.

STEP 6 · Confirmed & Done

- ✓ **Full notification set**
Claim confirmations, approvals/declines, rider-on-the-way alerts, and thank-you messages.
- ✓ **Routing data-fix**
Corrected a batch of 26 reassigned items whose notifications were going to the wrong donor.
- ✓ **Consolidated drop emails**
Multi-item drops now send one clean summary email instead of one email per item.
- ✓ **Consistent branding**
All email templates now share the same fonts, logo, and look.

SUPPORTING PILLARS — WORKING BEHIND EVERY STEP

These are not single steps in the journey — they run underneath all 6 steps above, on every item, every time.

PILLAR A · Privacy & Security

- ✓ **Chat privacy filter**
Phone numbers, emails, flat numbers, and social handles are auto-removed from in-app chat.
- ✓ **Address masking**
Public and courier-facing addresses show only the neighborhood/landmark, not the exact flat.
- ✓ **Login code hardening**
Login codes (OTP) can no longer be reused or brute-force guessed.
- ✓ **Verified courier data**
Courier status updates are now checked to confirm they truly came from the courier.
- ✓ **Cleaner internal routing**
Removed old hardcoded staff email addresses from system alerts.
- ✓ **Shorter login sessions**
Sessions expire sooner, reducing risk if a device is lost or shared.

PILLAR B · Stability & Performance

- ✓ **Crash prevention**
Fixed server crash risks under heavy photo-upload load.
- ✓ **Faster page loads**
Wall, admin, and donor dashboards now load in smaller batches instead of all at once.
- ✓ **Delivery-list fix**
Fixed scheduled pickups occasionally missing from a courier's daily list.
- ✓ **Correct local time**
All scheduling and reports now use India time (IST), not server UTC time.
- ✓ **Automated test suite**
Core flows now run through automated checks before anything goes live.
- ⚠ **Dashboard loading animations everywhere**
Smooth loading placeholders exist on the Wall; rolling out to every dashboard screen next.
- ⚠ **Donor dashboard data efficiency**
Partially optimized; a further pass will cut down on repeated data lookups.
- ✗ **Direct-to-storage photo uploads**
Uploads currently pass through the server before saving; streaming them straight to storage is planned for extra scale headroom.

PILLAR C · Admin Tools

✓	Admin dashboard Overview of sign-ups, drops, and claims in one place.
✓	Delivery controls Book, track, and cancel courier deliveries without leaving Admin.
✓	Analytics & filtering Live funnels and the ability to filter out internal test accounts from real activity.
✓	Data repair tools Built-in tools to fix a listing's status if it ever falls out of sync.

Bottom line: the full donor-to-doorstep journey — posting, AI photos, public listing, claiming, courier delivery, and notifications — is built, tested, and live on reloved.digital today. What remains is a short list of performance and process polish items; none of them block the platform from running day to day.

Reloved · Project Status Report · Prepared for client handover
